

Jason Scheurer Biography

Jason Scheurer has been in the construction business since 1983 and has extensive experience in all aspects of the industry. From his apprenticeship days as a framer, to a Field Project Manager for residential foreclosures (Fannie Mae & Freddie Mac), Jason has become an industry leader. After working at various construction companies throughout Southern California, Jason formed his own remodeling company in 1995 and began working in the greater LA/OC areas as a Licensed General Contractor. With many successful years as a Licensed General Contractor, and studying to become an Environmental Building Scientist, Jason had the opportunity to create a unique company (Living Green Homes Construction and Development, Inc.) to help grow the “Green Revolution” in the Orange County area. With this in mind, and his accomplishments within the building science arena, Jason has become one of the go-to Contractors in the energy efficiency and Green industry. Jason has the knowledge and expertise to build and remodel residences and buildings with important features including Comfort, Indoor Air Quality, Energy Efficiency, and Health/Safety, which he, in turn, shares with other green advocates, builders and consumers. He has educated, advised and provided services including whole house energy assessments, green products, and renewable energy.

Jason’s ability to secure more than twenty-five (25) different manufacturers and distributors to participate in a sponsorship program in his one-of-the-first of its kind all green homes in OC, called **Project 319 - www.LivingGreenOn319.com**, has set the stage for Living Green Homes to become a leader in Green Products and Technologies. Project 319 has received media attention locally and regionally and will be among the first “Net Zero Energy Homes” built new in Orange County. Jason has worked hands on with city officials and building inspectors to expand innovative technologies, green products, and help introduce new building codes, to ensure that they have the most current information on the explosive “Green Building Revolution.”

As an advocate of green building practices, Jason’s goals are to inspire, motivate, and assist developers, investors, asset managers, homeowners, and the community to understand the importance of building and living green as regulatory and market forces shift the industry toward green built environments that are healthier, safer, more resource efficient and less polluting with better indoor air quality.
